

Stuff that Might Help

Elizabeth Mansfield, PhD
Director, Personalized Medicine Staff
OIR/CDRH/FDA

Short, but profound list...

- Standards
- Quality Systems
- Curated databases of evidence
- Evidence

Where we are now

- Building standards (NIST/FDA/GIAB collaboration)
- Thinking about rationale regulation
- Looking at databases
- Following what is being offered

Goals

- Widely available standards materials/standards
- Systems built with quality metrics
 - What do I want to make, how should I design it to do what I want it to, how do I prove it does what I say it does?
- Useful databases to build, disseminate information
- Evidence to drive care—define actionable,
- Education/interpretation (decision support)
 - From the Training and Support page for physicians
 - commercial enterprise dispensing patient specific info suggesting care options for cancer patients

“Q: Do I need to know about genetics?”

“A: Not really.”
