Resources for EMR-based research at Vanderbilt

The Synthetic Derivative

A de-identified and continuously-updated image of the EMR: 2,500,000 subjects

BioVU

Subjects with DNA: >215,000

- Dense (GWAS-level) genotypes: ~20,000
- Exome chip data: 36,000

Resources for EMR-based research at Vanderbilt 2017

The Synthetic Derivative

A de-identified and continuously-updated image of the EMR: 3,000,000 subjects

BioVU

Subjects with DNA: >225,000

- Dense genotypes: >120,000
- Whole genome or exome sequencing: ~1000's

BioVU X PrediXcan: Gene-based PheWAS

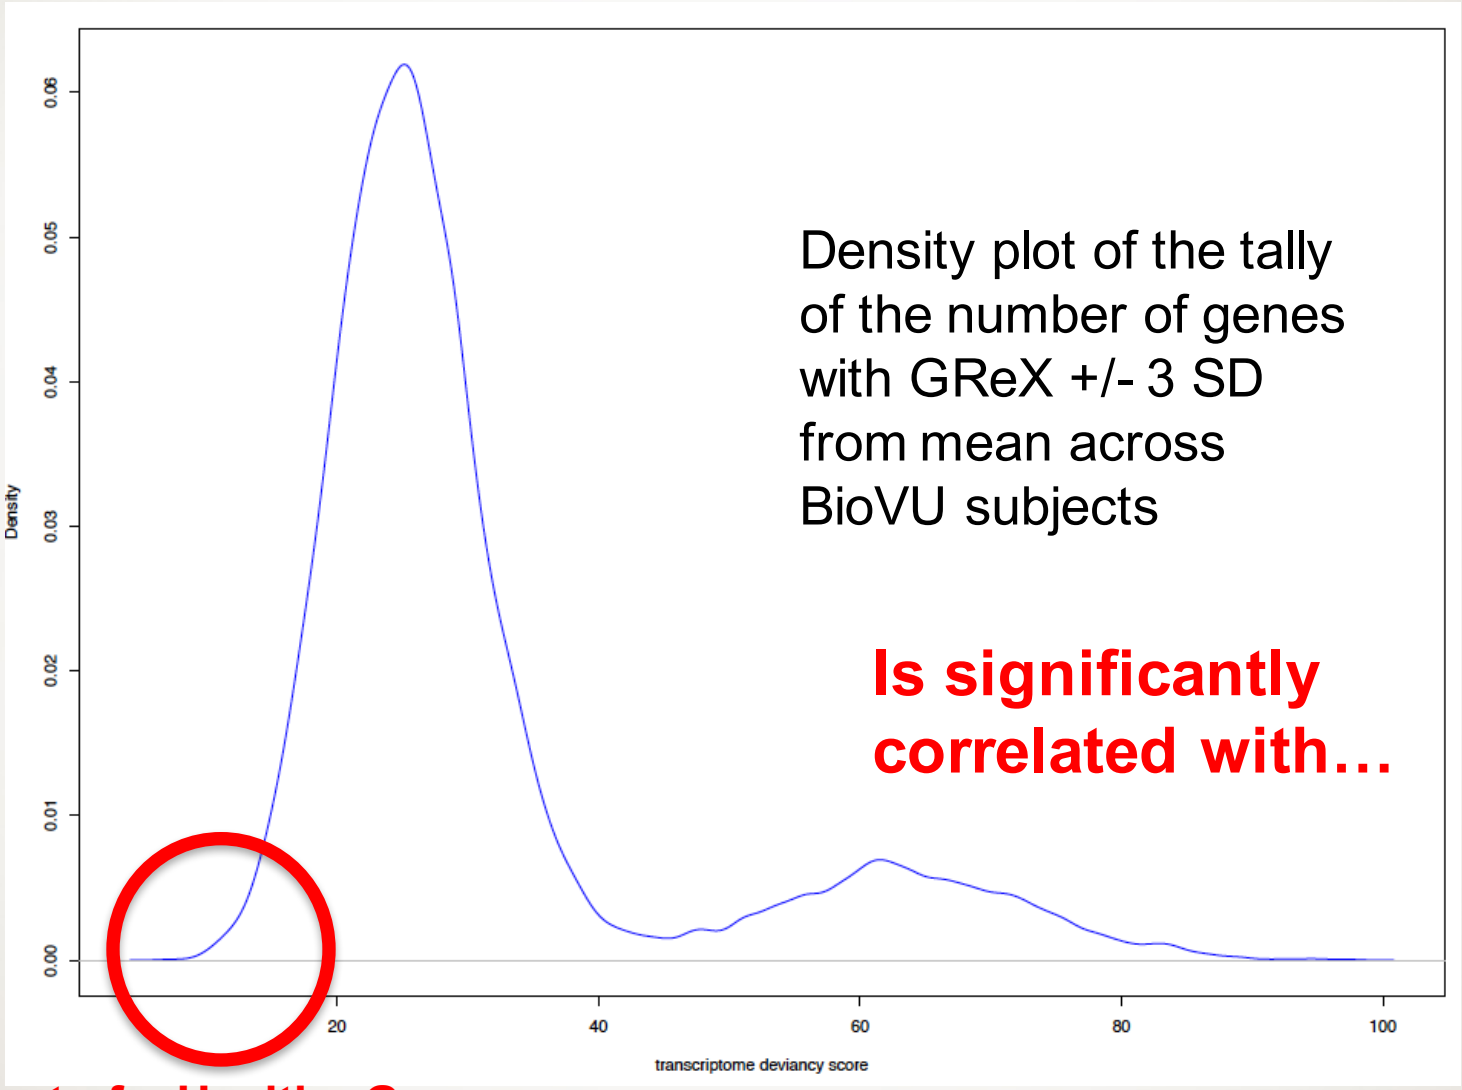
Comprehensive Gene X Medical Phenome Catalog

Knock-down each gene in each tissue and read out consequences across the medical phenome

Up-regulate each gene in each tissue and read out consequences across the medical phenome

An *in silico* Discovery Engine

Deviance of the Transcriptome



Density plot of the tally of the number of genes with GReX +/- 3 SD from mean across BioVU subjects

Is significantly correlated with…

Part of a Healthy Genome

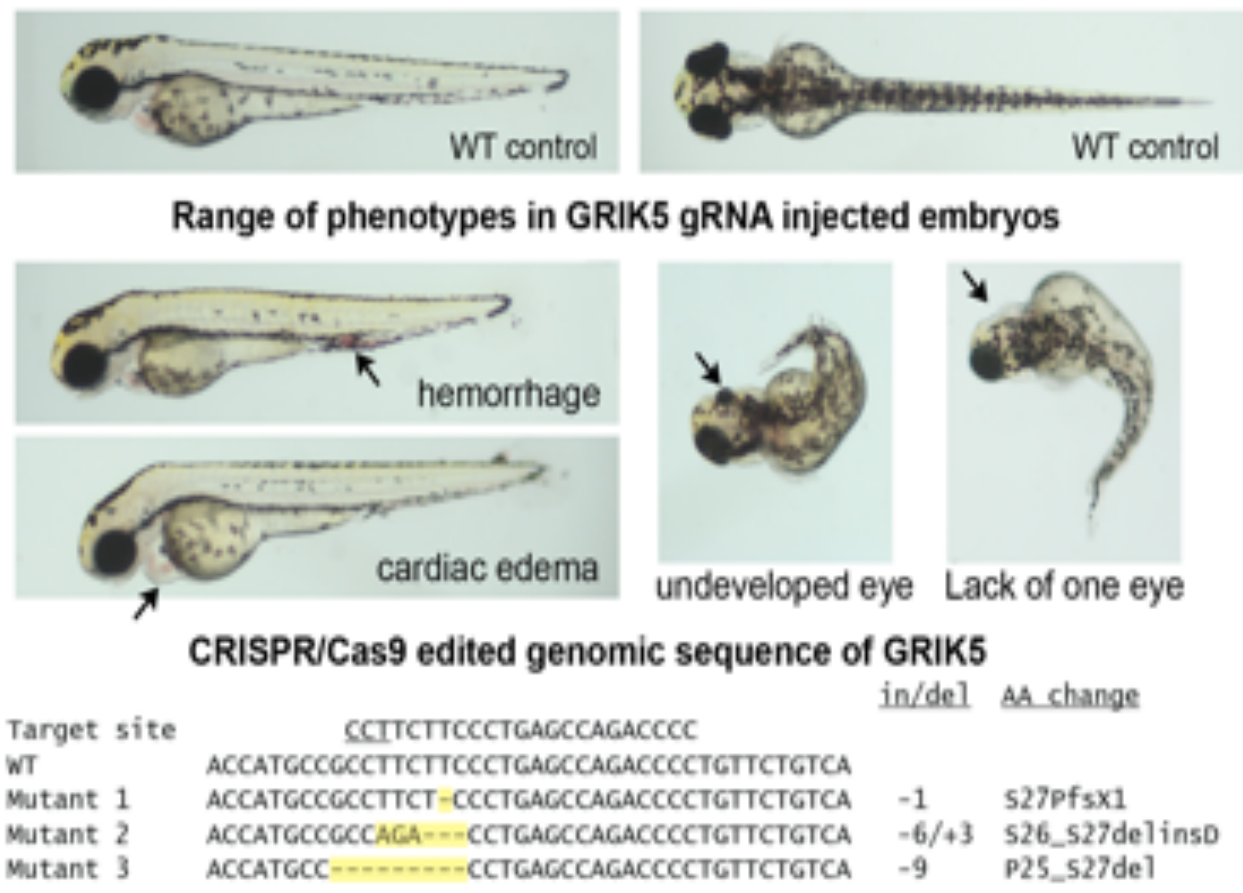
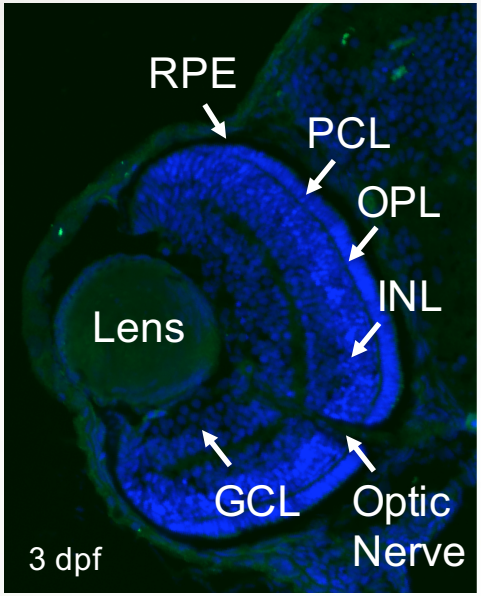
577.3	Cyst and pseudocyst of pancreas	40	0.00756
530.11	GERD	1268	0.00812
514.2	Solitary pulmonary nodule	20	0.00831

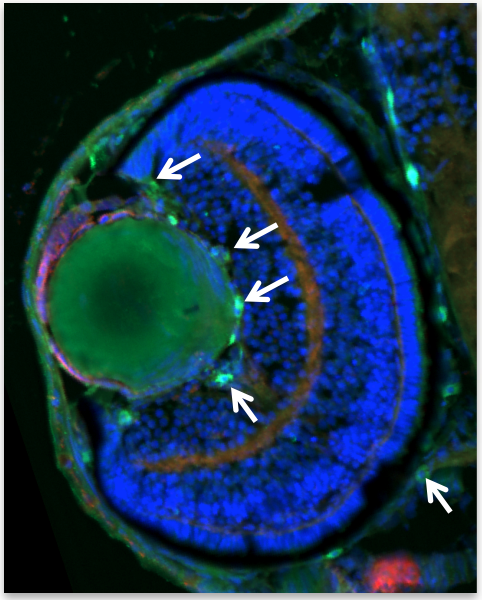
An Eye Super Gene?



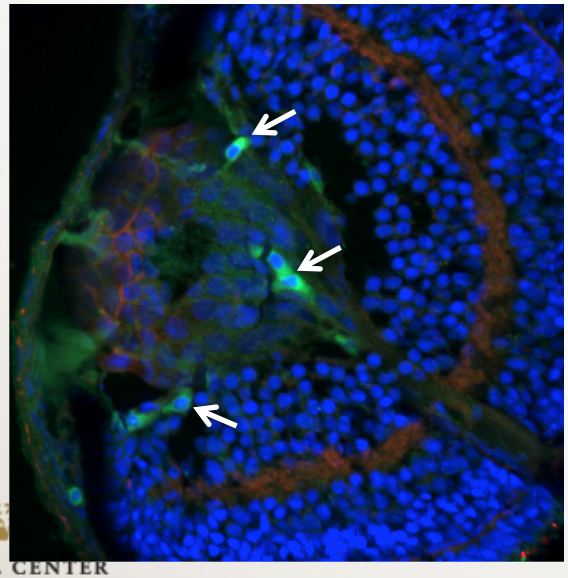
Zebrafish studies conducted in the Zebrafish Aquatic Facility by Ela Knapik, and students Daniel Levin, Gokhan Unlu, and Jessica Brown

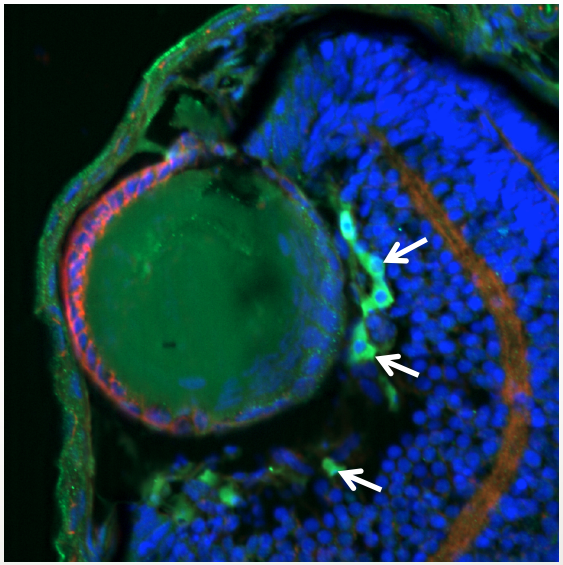
GRIK5 protein antibody staining in the zebrafish eye





RPE – Retinal Pigment Epithelium
PCL – Photoreceptor Cell Layer
OPL – Outer Plexiform Layer
INL – Inner Nuclear Layer
GCL – Ganglion Cell Layer





Nuclei (DAPI)
GRIK5

VANDERBILT MEDICAL CENTER

Continuum from Mendelian to Complex

Continuum from LOF to deleterious to ↓ expression

Nuclear Factor I, X-type – *NFIX*

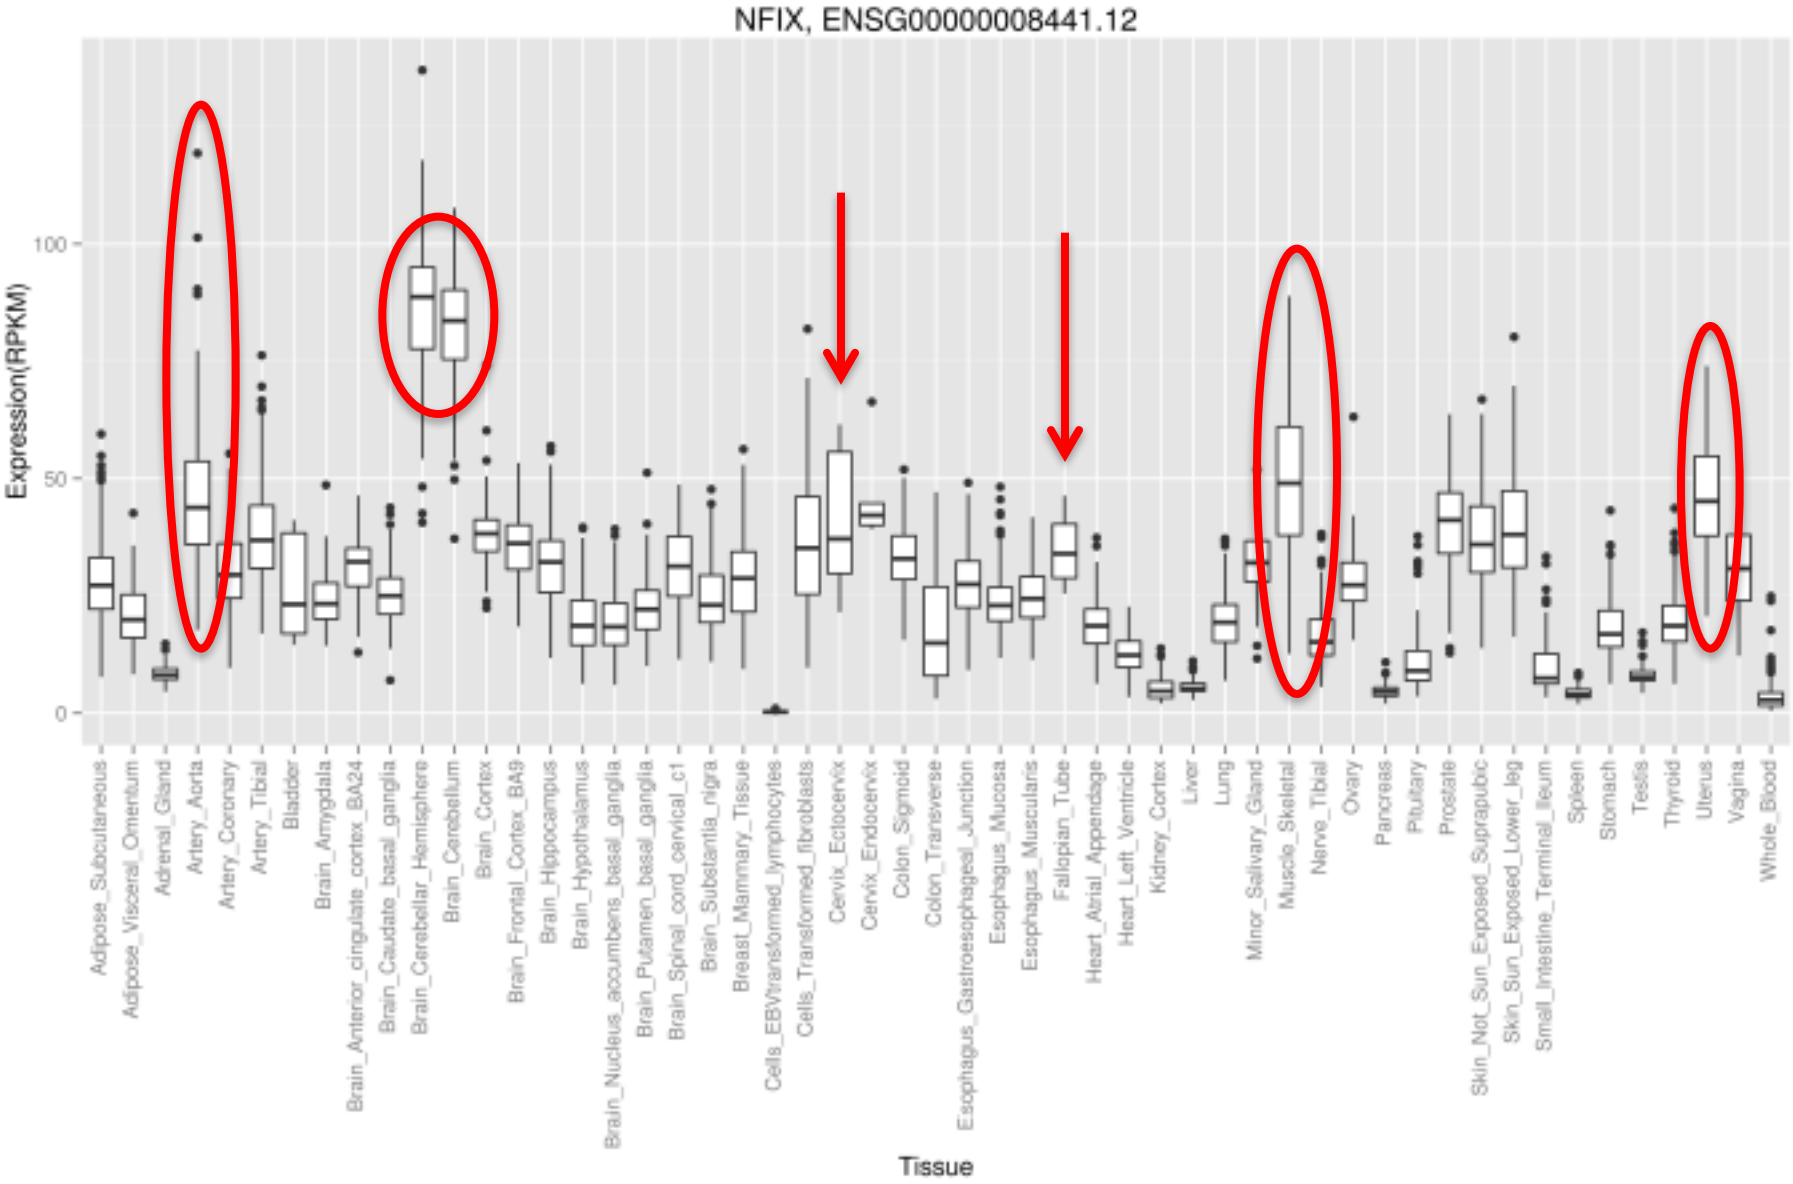
Mutations associatated with autosomal dominant diseases:

Marshall-Smith Syndrome

- Accelerated bone formation in hands and feet; fracture
- Diminished muscle tone
- Breathing difficulties; larynx and trachea "floppy"
- Facial features, blue sclera
- Mental and motor delays
  - Speech absent/abnormal
  - Intellectual disability / impairment

Sotos Syndrome 2

- Overgrowth in childhood; curvature/scoliosis, facial
- Muscle weakness
- Abnormalities of kidney, heart, eyes, ears, deafness
- Benign tumors, low-grade malignancies; seizures
- ID, behavior problems, speech/language disease
  - ADHD, OCD, etc
  - Stuttering, speech/language



VANDERBILT UNIVERSITY MEDICAL CENTER

NFIX Reduced Predicted Expression (blood)

Inflammatory diseases of uterus, except cervix			3.74E-19
Sialolithiasis			1.17E-12
Congenital anomalies of esophagus	In other tissues:		7.05E-12
Protozoan infection	Facial weakness	5.30E-10	1.42E-11
Pelvic inflammatory disease, NOS	Pneumonia due to fungus	5.46E-08	4.04E-11
Giant cell arteritis	Diseases of larynx and vocal cords	1.18E-06	1.11E-10
Acute inflammatory pelvic disease	Symptoms of respiratory system	6.11E-06	4.29E-10
Major puerperal infection	Symbolic dysfunction	8.00E-06	5.54E-10
Complications in administration of anesthetic / other sedation in labor delivery	Speech and language disorder	8.57E-06	5.81E-10
Cervical intraepithelial neoplasia [CIN] [Cervical dysplasia]			3.29E-09
Cardiac and circulatory congenital anomalies			7.04E-09
Aphakia and other disorders of lens	Disorders of tympanic membrane	2.21E-14	1.37E-08
Hypotony of eye	Neural tube defects	6.07E-06	3.06E-08
Pemphigus and pemphigoid	Kidney anomalies, disease	range	3.32E-08
Pelvic inflammatory disease (PID)	Fractures (ankle, foot, patella…)	range	3.43E-08
Hemarthrosis	Seizures, convulsions, epilepsy	range	8.65E-08
Viral infection			7.05E-07
Congenital anomalies of posterior segment of eye			1.09E-06
Cardiac congenital anomalies			1.40E-06

Dominant mutations: Sotos syndrome 2; Marshall-Smith Syndrome

VANDERBILT UNIVERSITY MEDICAL CENTER

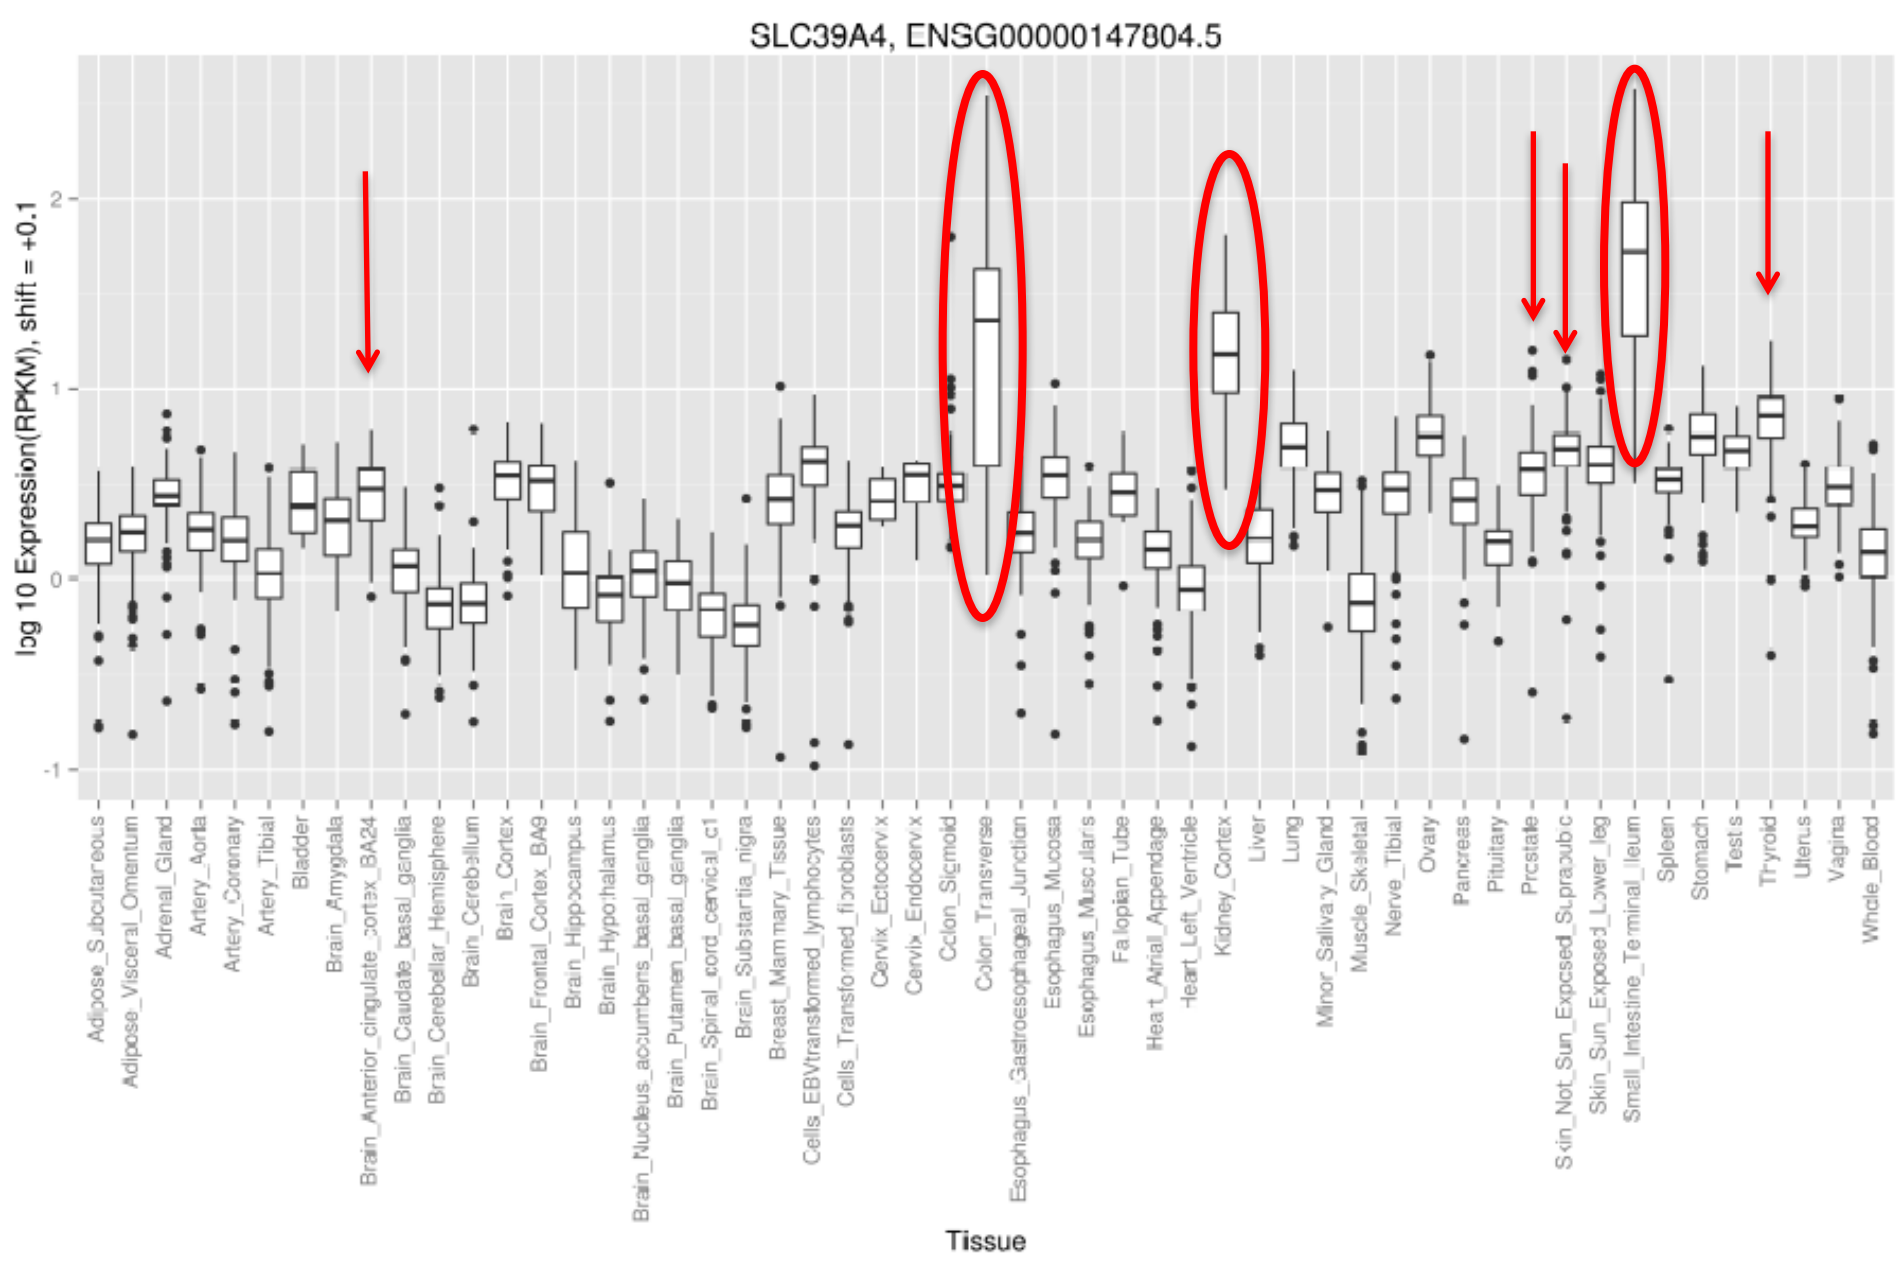
What we are doing…

- **Database of Mendelian disease genes and associated phenotypes** Improve diagnosis, Cycle back to phenotyping
  - Rare disease characterized in just a few patients; "data-driven models for range of clinical features"
  - Need for "OUTCOMES" as patients live longer
- **Creating a database of "Mendelian genes in waiting"**
  - Genes not (yet) characterized as Mendelian, but have multiple congenital anomalies and ID (and other really bad phenotypes)
  - One of the few ways to predict "de novo" phenotypes

SLC39A4: Autosomal recessive acrodermatitis enteropathica

Other phenotypes: chronic diarrhea, gastritis, serious behavioral problems, anemia; fatal in early childhood

5 days after zinc supplementation



SLC39A4, ENSG00000147804.5
log 10 Expression(RPKM), shift = +0.1

SLC39A4 Reduced Predicted Expression (blood)

Other hypertrophic cardiomyopathy	1.61E-16
Hereditary hemolytic anemias	1.24E-13
Benign neoplasm of other fema	1.45E-10
Schizophrenia	3.43E-09
Acquired deformities of hip	1.82E-07
Toxic effect of corrosive aroma	2.45E-07
Mineral deficiency NEC	2.23E-06
Kaschin-Beck disease	2.92E-06
Multiple gestation	3.09E-06
Iodine hypothyroidism	3.13E-06
Abnormal spermatozoa	3.56E-06
Cervical incompetence	4.76E-06
Intestinal disaccharidase defici[illegible]	6.78E-06
Gastritis and duodenitis, NOS	1.00E-05

In other tissues:

Impetigo	10.0E-22
Pilonidal cyst	1.31E-11
T2D	8.52E-11
Pruritis and related conditions	4.27E-10
Disorders of mineral metabolism	2.29E-08
Acute renal failure, …	3.70E-08
Primary pulmonary hypertension	8.69E-08
Suicidal ideation or attempt	1.64E-07
Other cerebral degeneration	9.26E-07
Bullous dermatitis	6.24E-06
Psoriasis	
Diarrhea, ...	
Gout and crystal arthro	

Recessive mutations: Acrodermatitis enteropathica

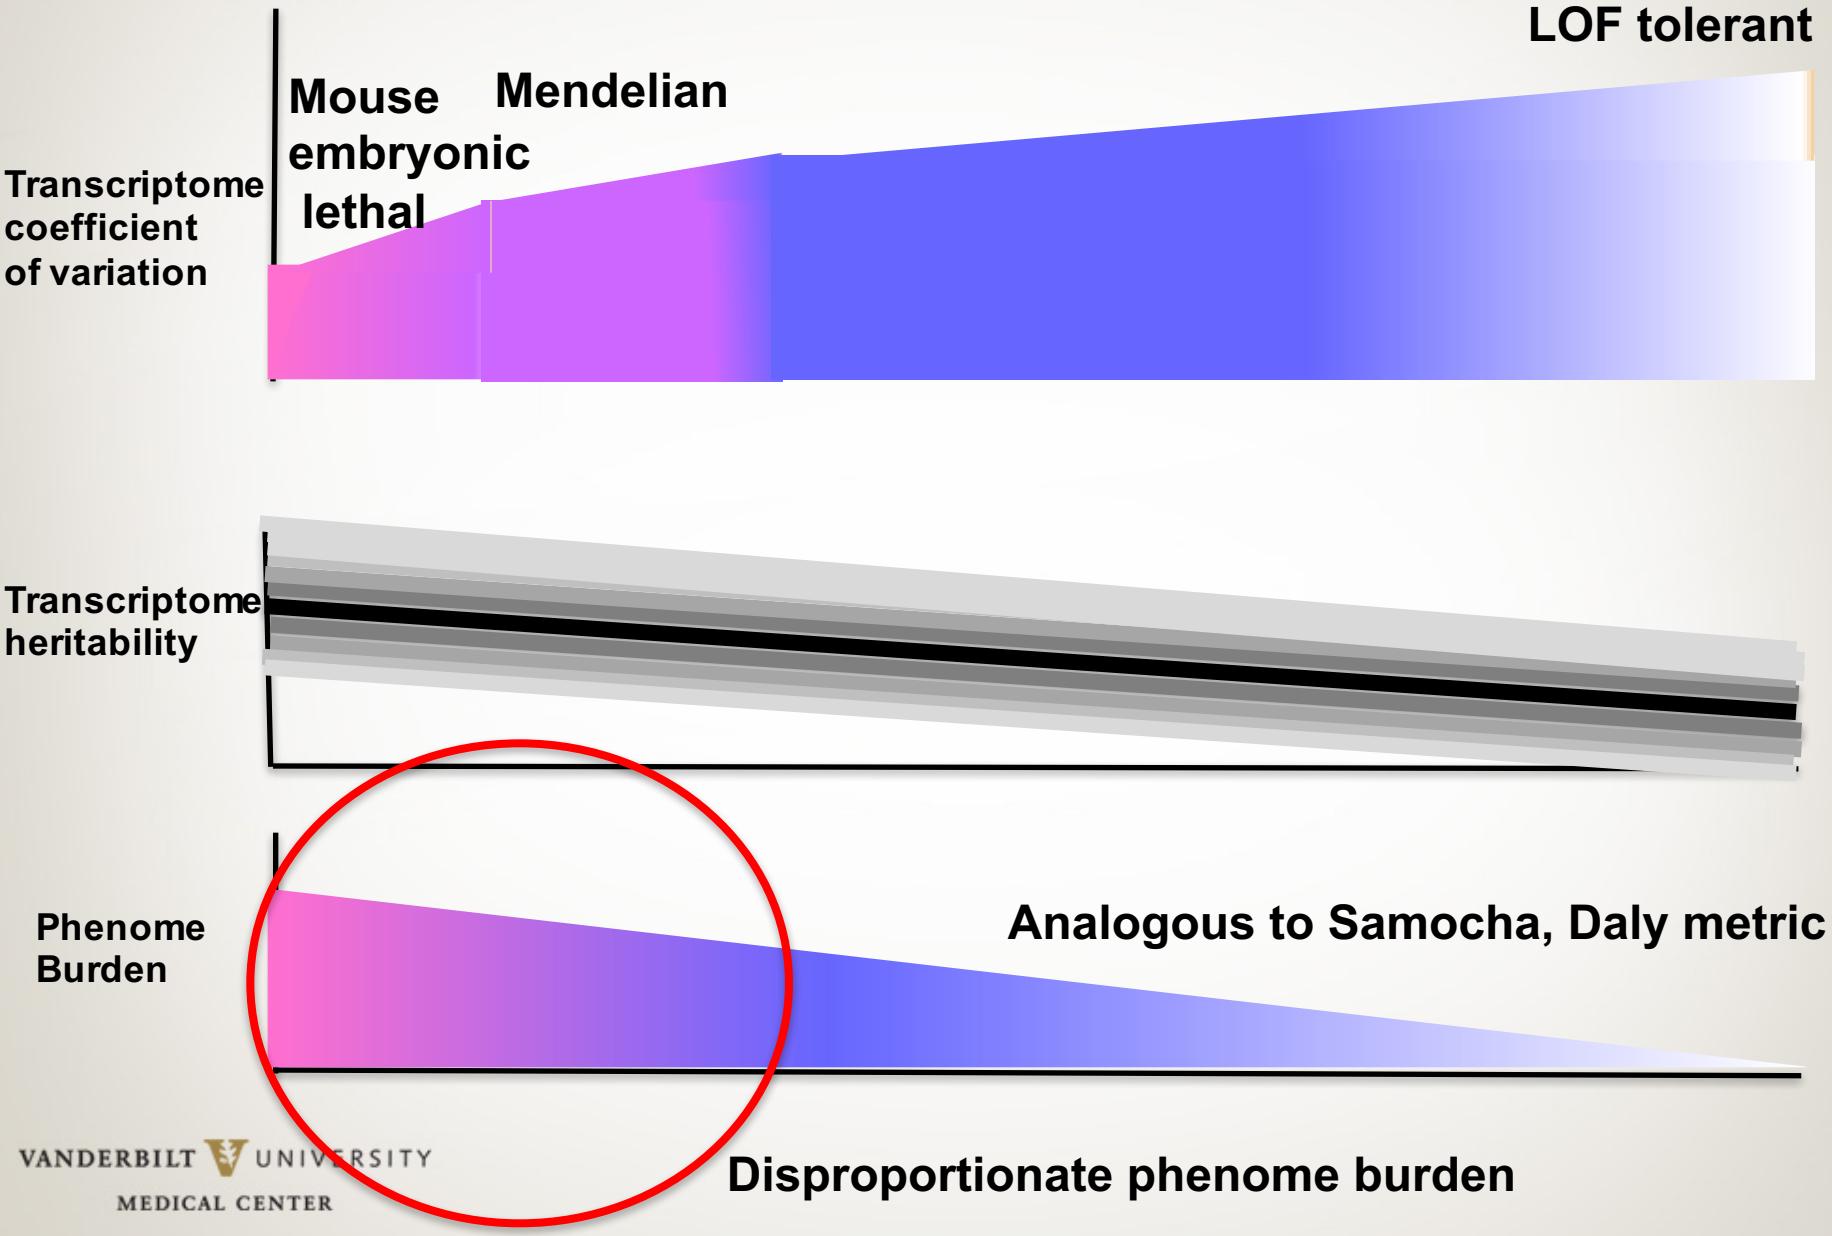
VANDERBILT UNIVERSITY MEDICAL CENTER

Continuum between Mendelian and Common Disease

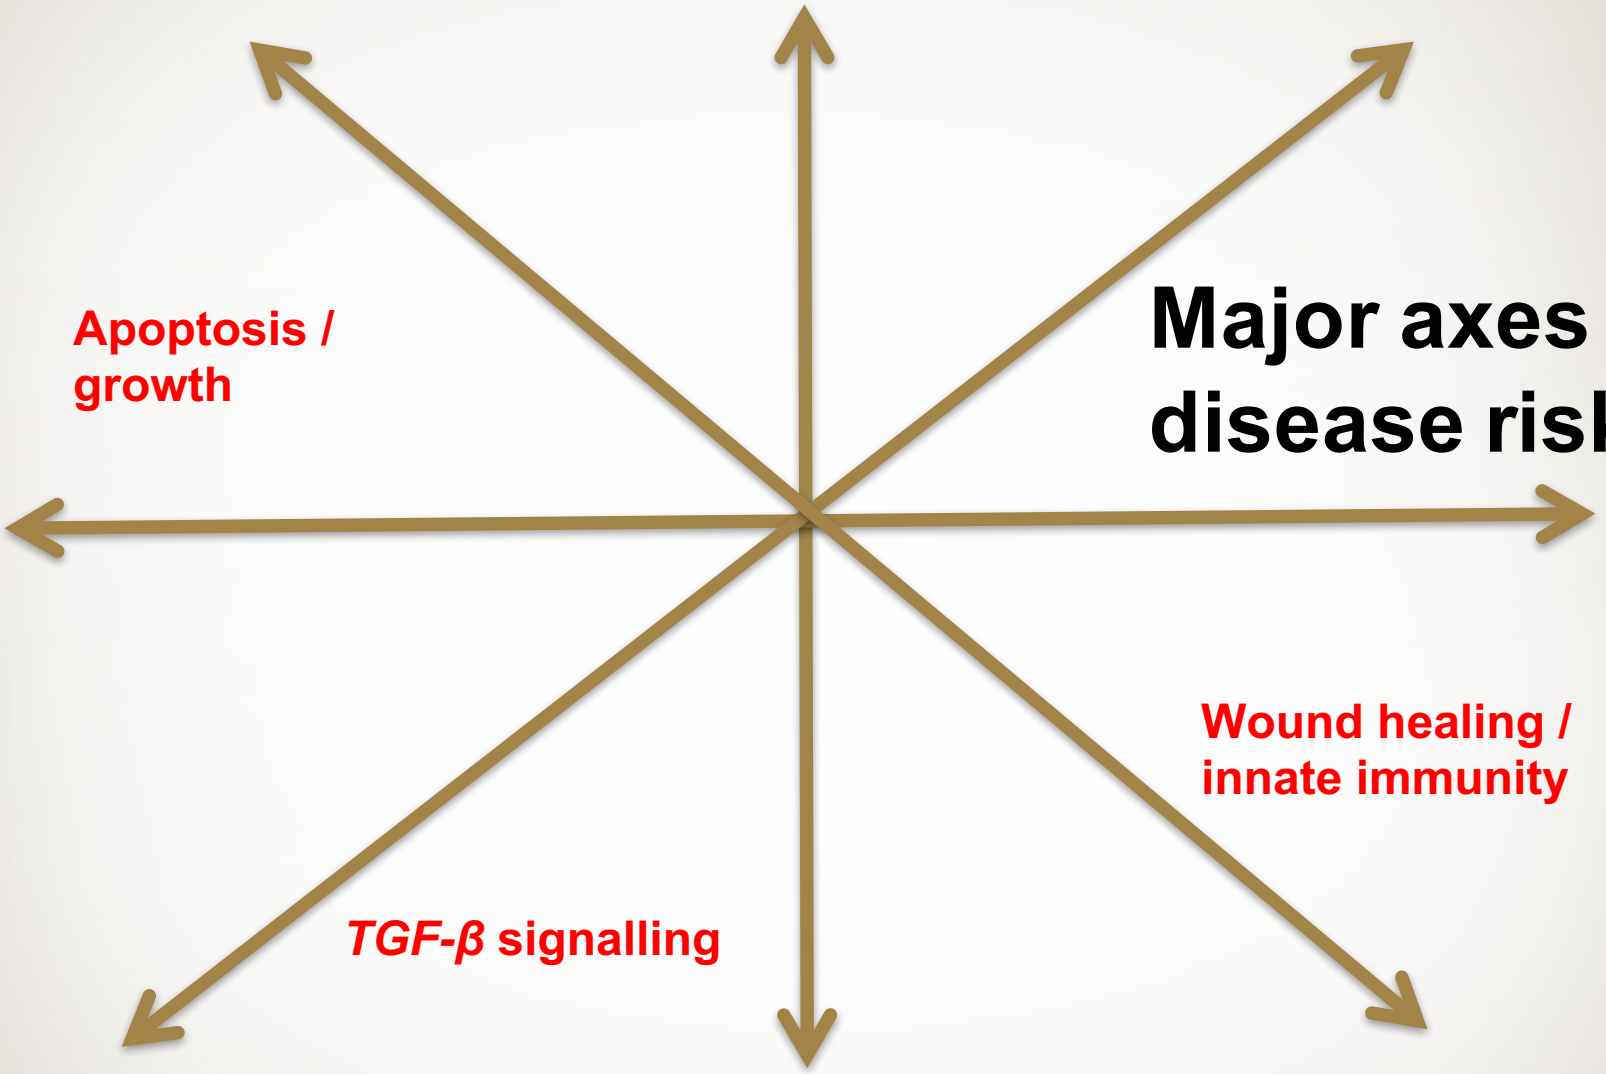
- There are dozens of Mendelian diseases that can be treated reasonably effectively with innocuous therapies – vitamin or mineral supplementation or dietary intervention
- There WILL be more people with increased risk of disease due to reduced expression of JUST these genes than there are people who have a Mendelian disease

Acrodermatitis enteropathica: 1 / 500,000 live births; none in BioVU now
>5000 patients in BioVU today are at high risk for worst sub-phenotypes
>300 patients in BioVU will have multiple of the worst sub-phenotypes

Big Picture …



VANDERBILT UNIVERSITY MEDICAL CENTER



Apoptosis / growth
Major axes of disease risk
Wound healing / innate immunity
TGF-β signalling
